Portfolio Risk Executive Summary

The portfolio comprises 1,328,284 loans with a blended default rate of approximately 22.6%. Grade C and D segments represent 43.6% of the book yet account for over \$2.39 billion in combined default exposure, while Grade G — though small at 0.7% of portfolio — carries the highest default rate at 51.2%. Total identified default exposure across all grades exceeds \$4.44 billion.

The two highest-risk segments are small business lending (31.5% default rate) and high-DTI borrowers (>30% DTI, 31.2% default rate). Small business loans exhibit elevated average rates of 15.98%, compounding loss severity, while high-DTI borrowers represent 126,976 accounts where debt servicing capacity is demonstrably stretched — a structural concentration risk.
